**Subject:** CFAC Questions

Mike,

This is what I sent over to the SW/HW guys as questions, I think Cory has been on site and maybe you've talked through this;

- 1) Is the concrete suitable for disposal onsite? I think this was answered by the sampling previously done and indicates the material is non-hazardous.
- 2) What is the appropriate path for a rubble in-place action? Would this be a new solid waste disposal facility?
- 3) If solid waste disposal on site occurs, what are the implications for CERCLA and the superfund investigation? I need to Check with Mike Cirian to determine if any sampling under the slab has occurred.

Let me know your thoughts.

Tom
